PRIYAL SAXENA

Associate Developer | Data Analytics, AI/ML & Data Engineering

Dehradun, Uttarakhand, India | 6396347780 | priyalsaxena421@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science undergraduate (B.Tech, VIT Bhopal University) who builds Python and SQL data pipelines, machine learning and NLP models, and Power BI dashboards on large datasets (6.3M+ records). Hands-on with sentiment analysis, image classification and a semantic-search chatbot; working knowledge of Generative AI, LLMs, Azure/AWS and Agile. Strong in data analysis, validation and data quality across structured, semi-structured and unstructured data, and in translating business requirements into data solutions.

TECHNICAL SKILLS

- **Programming & Querying:** Python (Pandas, NumPy), SQL (Joins, Aggregations, Views, Window Functions, CTEs, Query Optimisation), PostgreSQL, MySQL
- **AI, ML & Generative AI:** Generative AI concepts, Large Language Models (LLMs), Prompt Engineering (introductory), Machine Learning (Scikit-learn, TensorFlow, Keras), Deep Learning (Transfer Learning), NLP & Text Mining (TF-IDF, Sentiment Analysis, Sentence Transformers, FAISS semantic search), Computer Vision (OpenCV), Feature Engineering, FastAPI (REST APIs)
- **Data Engineering:** ETL-style Pipelines, Data Integration, Cleansing & Normalisation, Data Validation & Integrity, Process Automation, Databricks; structured, semi-structured and unstructured data
- **BI & Reporting:** Power BI (DAX, Interactive Dashboards, KPI Tracking), Tableau, AWS QuickSight, Excel (PivotTables, VLOOKUP, XLOOKUP, Macros), Ad-hoc Reporting, Data Storytelling
- **Analytics:** Exploratory Data Analysis (EDA), Statistical Analysis, Trend & Risk Identification, Anomaly & Fraud Detection, RFM & Cohort Analysis, A/B Testing Fundamentals
- **Delivery & Tools:** Agile/Scrum, JIRA, Git/GitHub, Jupyter, Google Colab, ERP & CRM Systems, Stakeholder Communication, Team Leadership

PROFESSIONAL EXPERIENCE

Team Lead Intern | Bluestock Fintech Apr 2025 - May 2025 | Remote

- Led a cross-functional team on data acquisition, transformation and reporting workflows for a full-stack web application using PostgreSQL.
- Built and validated SQL queries against relational database structures, contributing to a 20% improvement in UI responsiveness and a 15% reduction in page load time.
- Managed sprint planning and milestone tracking in JIRA (Agile); translated business requirements into data solutions with developers and stakeholders.

Data Analyst Intern (AI/ML) | LearnNex May 2024 - Jul 2024 | Remote

- Integrated data from multiple sources and cleaned, normalised and preprocessed 10,000+ records using Python and Excel, identifying trends and data quality issues.
- Performed feature engineering and EDA that improved downstream machine learning model accuracy by 35%; documented process improvements that reduced processing time by 25%.
- Produced ad-hoc reports and turned findings into clear, non-technical recommendations for cross-functional stakeholders.

PROJECTS

Smart Retail Customer Intelligence Platform | *Python, TensorFlow, Keras, Scikit-learn, OpenCV, FastAPI*

- Built an AI-powered retail analytics system combining four machine learning modules: product image classification, customer review sentiment analysis, face recognition and a semantic-search chatbot.
- Developed an NLP sentiment classifier (TF-IDF with Logistic Regression) that labels customer reviews as positive, neutral or negative, reaching 76.5% accuracy on the Women's Clothing E-Commerce Reviews dataset.
- Trained a product image classifier using transfer learning (MobileNetV2) on the Fashion Product Images dataset, and an SVM-based face recognition model on the Labeled Faces in the Wild dataset.
- Built a customer support chatbot using Sentence Transformers embeddings and FAISS for semantic search over common retail queries; working on serving the models through FastAPI REST APIs.

Banking Risk & Fraud Analytics Platform | *Python, SQL, Power BI, Excel*

- Built a Python and SQL data pipeline to capture, integrate, clean and normalise 6.3M+ banking transaction records, with data validation checks to maintain data integrity.
- Applied statistical EDA to identify fraud patterns and high-risk indicators; developed interactive Power BI dashboards with fraud KPIs and risk metrics, delivering data-backed recommendations for fraud prevention and risk mitigation.

E-Commerce Customer Intelligence Platform | *Python, SQL, Power BI, Pandas*

- Applied RFM segmentation and cohort analysis to relational retail transaction data (CRM-style analytics) to identify high-value customer groups, purchasing trends and retention risks.
- Automated data preparation and reporting in Python; built Power BI dashboards tracking sales, retention and revenue KPIs.

EDUCATION

B.Tech in Computer Science Engineering | VIT Bhopal University, Bhopal Oct 2023 - May 2027 (expected)

CERTIFICATIONS

Data Analysis (Microsoft Learn & LinkedIn Learning) | Intro to Generative AI and LLMs (Google)
